CAR CRASHES ARE THE LEADING CAUSE OF DEATH AMONG TEENS

Keep your community and students safe by offering virtual driver training to your students ... *Driver Ed not required*

Virtual Driver Interactive (VDI) is a leader in fully interactive simulation technology, benefiting from a lineage that includes nearly two decades of military simulation. Our goal is to provide this same level of experience and expertise to teen drivers in an effort to reduce crashes and save lives.

You can seamlessly incorporate VDI's flexible virtual training program into your high school curriculum through a:

1) Life Skills & Wellness class
2) Advanced defensive driving course for your licensed drivers
3) Augmentation to your existing Driver Ed program

Life Skills & Wellness Class

Seamlessly incorporate our STREETReady™ training program into your Life Skills & Wellness class. This curriculum will prepare young teens for adulthood by learning critical driving skills in a safe, controlled environment and it does not require instruction from a certified Driver Ed teacher. As students successfully complete the program, they can become qualified to park on campus when they secure a driver's license.

Virtual Defensive Driving Course

VDDC™ (Virtual Defensive Driving Course) combines proven defensive driving curriculum with actual behind-the-wheel driving in a simulated environment for licensed drivers. The virtual driving instruction allows drivers to gain important insight and experience in potentially hazardous situations. Concepts presented in VDDC include separation distances, collision avoidance, and the dangers of driving under the influence.

Like STREETReady™, VDDC™ is user friendly and self paced, therefore can nearly run itself! For example, you can put a virtual trainer nearly anywhere, such as in the library, study hall, or after-school site, and implement a sign-in program that allows students to access the trainer on their own time (i.e. homework). Completion of this course can be a qualification to parking on campus or participating in extracurricular activities.

Existing Driver Ed Program

The STREETReady™ training program is designed for 10th, 11th and 12th grade teenage drivers and was developed in partnership with the American Driver and Traffic Safety Education Association (ADTSEA), the national driver education experts. By combining this nationally recognized curriculum with the finest available graphics and simulation technology, VDI allows students to learn and practice critical driving skills in a safe, controlled environment. We have correlated our curriculum to commonly used in-class programs to ensure easy implementation for Driver Ed teachers. We believe the most effective Driver Ed program includes behind the wheel, classroom, computer-based and simulation training.

Virtual Driver Interactive's education team is trained to help you secure funding and has extensive experience integrating virtual trainers into new or existing programs.
